

LUVENA- hyaluronic acid, collagen precursor, Calendola combination

When to use it

The product is indicated for the treatment and prevention of **vaginal dryness** and related symptoms (**irritation, itching, burning, dyspareunia**) which can occur both in fertile age and in menopause. It promotes the maintenance and recovery of the correct degree of hydration of the mucosa, giving rapid relief to symptoms related to dryness, such as burning and intimate itching, redness, pain, or slight bleeding during sexual intercourse.

Who

Adults	✓	
Children	✗	
Pregnancy and breastfeeding	✓	On medical device.

Particularly, the medical device contains hyaluronic acid, glycerin, collagen derivatives (tripeptide 29) as moisturizing agents for maintaining physiological hydration; caprylic/capric triglyceride as an emollient, to strengthen the lipid film on the skin surface and create a barrier effect; hydroxyethyl acrylate / sodium acryloyldimethyl taurate copolymer to promote the formation of an adhesive film on the skin and mucosa which increases the persistence of the product in the application area, strengthening the barrier effect.

The product is also characterized by the presence of calendola hydroglyceric extract to support the moisturizing action and oenothera oil to support the emollient action.
